FOR IMMEDIATE RELEASE

Standard Builders Receives 2013 CBC Project Team Award for Yale's Becton Center for Engineering Innovation & Design and Cafe

Hartford, CT - The Connecticut Building Congress has honored Standard Builders and fellow team members with an Award of Merit in the small renovation category for their collaboration and diligence on the recently completed Becton Center for Engineering Innovation & Design and Café for Yale University.

The team exhibited a strong, interdisciplinary, collaborative spirit throughout the project while maintaining a

consistent focus on the Owner's business objectives. This collaborative spirit was evident from the very beginning, when the team worked together during a comprehensive preconstruction effort, which resulted in a smooth transition into the construction phase and throughout the duration of the project. 3D modeling provided efficiency and was a catalyst for achieving greater precision during construction.

"The project team performed at the "high level" required by truly understanding the University's needs during design and construction to develop this innovative and functional learning space", stated David Cripe, Project Manager for Yale University.

A panel of judges consisting of Owners, Architects, Engineers and Contractors considered a number of criteria for the award including team cooperation and collaboration, timing and budget considerations, and social and economic impact.

Founded in 1949, Standard Builders utilizes traditional construction expertise to provide its clients with value added services in the commercial, institutional, and health care market segments throughout Connecticut and Western Massachusetts. Standard Builders continues to set the standard for building excellence.
